

Our feed for your friends.

This blend of easily sprouted seeds will release stored nutrients as they begin to grow, creating a natural superfood for birds.

INSTRUCTIONS

RINSE well until water runs clear

SOAK for 8-12 hours in a bowl, well covered in water (3 x water to Super Sprout)

Spread sprouts in a colander, bag or dish and place in a dark, well ventilated area

RINSE well several times a day

Super sprout is ready for use when tails first begin to appear

Rinse well and allow to dry off before serving.

NOTES

Luke warm water is best for rinsing to remove by-products generated by sprouting

Maximum nutritional goodness is obtained when the sprout first appears

Mix with your bird's favourite food for the first one or two days until they adjust to new type of feed

Refrigerate unused sprouts for 1-2 days. Rinse daily until used

For extra goodness add some fresh fruit and vegetables to the sprouted seed

NEVER feed old or spoiled sprouts. Sprouts should smell sweet and earthy, not sour.
